Subject: epidural,(pf) roids

I want to tweak our testing + process a little as far as the (pf) roids that are injected epidurally. I think that we can tighten up the process slightly to cover our behinds.

1) We should do fungal testing on every lot of the (pf) steroids in future
2) We should also organize/schedule the vial filling process so that we at least do a sterility test on every "bulk" fill….like our other "stock" processes.

Lets discuss……I have already updated the TA40(pf),MP40(pf),MP80(pf), and beta(pf) ……as far as the "fungal" testing with ARL

We have a client that order 500 MP80-pf at a time for 3-4 MD's and one of the docs has a few patients with infections
